Effective SOFTWARE DEVELOPMENT SERIES

Effective DEBUGGING

디버깅 지옥에서 탈출하는 66가지 전략과 기법

Addison-Wesley 한국판

Overview

- SWOT analysis of e-government in Greece
- Key interventions
- Key projects

Strengths

- Up-to-date digital national strategy
- Key implemented projects
 - Taxation
 - Social security
 - e-prescriptions
 - Customs
 - Municipal rolls
- Transparency and openness initiatives
- Heroes

Weaknesses

- Gap between strategy, actions, implementation
- Lack of high-level architecture
- Ambitious projects without maintenance plan
- No process reengineering
- Data and application silos

Opportunities

- Human resource capital
- IT innovation in startups
- EU funding and know-how
- Meritocratically appointed civil servants
- High penetration of smart mobile devices in the Greek population

Threats

- Complex, changing, non-codified legislation
- Ineffective human resource management
- Lack of continuity in civil administration
- Uncoordinated units
- Lengthy, bureaucratic, inflexible procurement processes
- IT suppliers
- Rapid depreciation of IT assets
- Stingy national investment for IT development and maintenance
- IT security risks
- Problematic application of personal data protection framework

Key interventions

- Bring strategy and implementation under one roof
- Adopt centralized IT architecture
- Ensure long-term IT maintenance and evolution
- Procure IT services and agile software development
- Statutory enforcement of IT system use
- Statutory changes for remote provision of services

Key projects

- Digital id card
- Registry of entities interacting with public sector systems
- Open up IT systems, instead of asking for paper documents
- Priority handling software
- Civil service organization chart

Thank you!
